

Why Python having demand in current industry

→ python has the most promising career opportunities

→ python is simple and easy to write code

Ex:-

```
print ('Hello')
```

→ Python is dynamic programming language
↓

Because in python

Variable name = Variable value
)

This means we can assign any type of value to a variable

Ex:-
 $a = 10$ (int)
 $a = 10.5$ (float)

→ python is a portable language (cross-platform)

→ python is free and open source

→ python is supporting all major databases

→ Python is providing so many modules (or) packages

→ Predefined modules or packages → os, re, json, math, sys, datetime, time, calendar

→ Third party modules or packages ----> numpy, pandas, seaborn, django, flask,

* Python is scripting oriented programming language

* Python is a interpreted programming language

checking line by line IF line is right then moving to next line otherwise no

Exo-

a=10

b=20

result = a+b

print (result)

* Python is functional oriented programming language

* Python is object oriented programming language

Why Python is Interpreted Programming Language

- * It converts source code to binary code

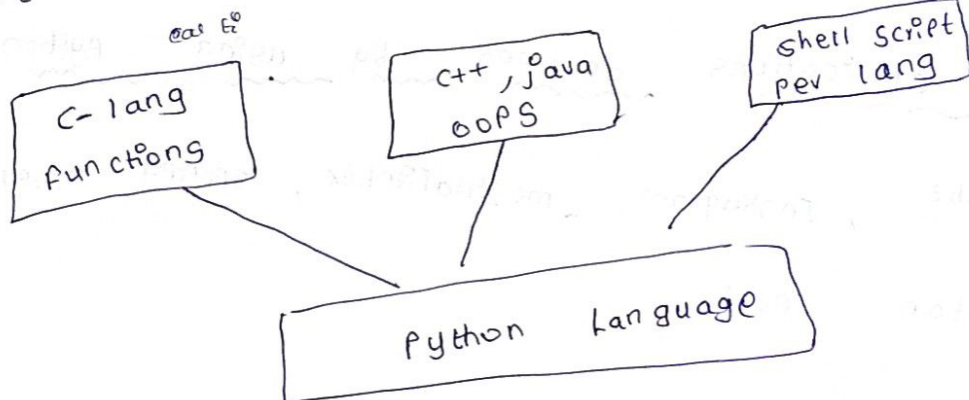

Ex:-

```
a=10  
b=20  
result = a+b  
print (result)
```

101010
100100
010100

Responses
(or)
output

- * All features are available in one language that is python

* About Python

- * Python is a high level programming language
- * Python follows Automatic Garbage collection
- * Python is scalable programming language (low, medium, high)

- + Python is versatile programming language
- Banking, Networking, Gaming, Animation
- + Python has huge community support
- + Python providing documentation

Advantages

Less time

Less cost

Less code

Best Products

Tops applications developed by using python

→ Youtube, Instagram, mozilla Firefox, Spotify, Bitbucket, Washington Post

History of python

Who - Guido Van Rossum

Where - CWI

Why → for merging multiple language related features

when → 1980, 1989 (1991 - Released)
 discussion starts

Name → many python circle flying

Company Name → 2001 → Python Software Foundation
