

Comments

In general comments are used in a programming language to describe the program or to hide the some part of code from interpreter

+ Comments in Python can be used to explain any program code. It can also be used to hide the code as well

+ Comment is not a part of program but makes the program readable

Python supports two types of comment

- + Single line comment
- + multi line comment

Single Line Comment

+ In case user wants to specify a single line comment, then comment must start with '#'

Example

```
# This is single line comment  
print "Hello Python"
```

Multi Line Comment

Multi lined comment can be given inside there

quotes

Example

'''

This is

multiline

comment'''

Print "Hello python"

Output

Hello python
