

Python Literals

(2-60-27 May)

concept

26

- * In Python data is technically called as literal
- * Literals are classified into several types they are
 - * Integer literals $\rightarrow a = 10$
 - * float literals $\rightarrow b = 20.50$
 - * complex literals $\rightarrow c = 2 + 3j$
 - * Boolean literals $\rightarrow z = \text{True}$
 - * String character literals $\rightarrow 'x'$
 - * String literals $\rightarrow "abc"$
- * Sequence literals = list tuple set $\rightarrow [1, 2, 3, 4]$
 $(1, 2, 3, 4)$ $\{1, 2, 3, 4\}$
- * Mapping literals = $\{ "end": 2 \}$

Collection Literals

- * list = $[1, 2, 3, 4]$
- * tuple = $(1, 2, 3, 4)$
- * set literals $\{1, 2, 3, 4, 5\}$
